Thank you for downloading **SafetyBarrierManager**

In order to run **SafetyBarrierManager**, extract the following files from the Zip archive to the **same** folder in your computer (it may be a USB drive, but it is best to run it from a fixed drive, because the registration key depends on the drive):
- All DLL files:
  - Libifcoremd.dll
  - Libifportmd.dll
  - Libmmd.dll
  - Msjava.dll
  - Msvcr80d.dll
  - Safebarmanbdd.dll
- The help files:
  - SafeBar.chm
  - Safebar_1026.chm (only if you want access to the Bulgarian help)
- The executable:
  - SafetyBarrierManager.exe
- The language resource files (only if you want to run with Danish or Bulgarian localized program interface):
  - SafetyBarrierManager.BGR
  - SafetyBarrierManager.DAN

In order to run **SafetyBarrierViewer**, extract the following files from the Zip archive to the **same** folder in your computer (it may be a USB drive):
- The help files:
  - SafeBar.chm
  - Safebar_1026.chm (only if you want access to the Bulgarian help)
- The executable:
  - SafetyBarrierViewer.exe
- The language resource files (only if you want to run with Danish or Bulgarian localized program interface):
  - SafetyBarrierViewer.BGR
  - SafetyBarrierViewer.DAN

Please note that it is necessary to register with a license number to remove the restrictions of the unregistered version. For information about licensing, contact safetybarriermanager@dtu.dk. (The registration key depends on what drive you are running from – there are restrictions on how many drives you may run the program from)

The unregistered version is fully functional with following exceptions:
- There is a maximum of 15 conditions and 2 diagrams (when opening a file with more than 15 conditions or 2 diagrams it is not possible to edit the file)
- The text "unregistered" is displayed behind the diagrams.

Consult the help file in order to get started. The easiest way is to open an existing template. A zip set with sample diagram files can be downloaded from the download page

If you have any questions or remarks, please contact us at safetybarriermanager@dtu.dk, and we will try to help you.
